

Workout Creator

Search for exercise

- TUCBW the user enters a search query into the exercise database search bar.
- TUCEW the system displays a list of exercises that match the user's query.

Add exercise

- TUCBW the user selects an exercise from the database to include in their new workout.
- TUCEW the selected exercise is successfully added to the current workout draft.

Filter exercises

- TUCBW the user applies one or more filter criteria (e.g., equipment, muscles trained, recommended, or template).
- TUCEW the system updates the displayed exercise list to show only items matching the selected filters.

Remove exercise

- TUCBW the user selects an exercise currently in their workout draft and chooses the delete option.
- TUCEW the exercise is successfully removed from the workout draft.

Save workout

- TUCBW the user clicks the save button after finalizing their workout routine.
- TUCEW the system successfully stores the new workout to the user's profile.

Workout Editor

Search for exercise

- TUCBW the user enters a search query while editing an existing workout.
- TUCEW the system displays matching exercises available to add to the workout.

Add exercise

- TUCBW the user selects a new exercise to add to an already saved workout.
- TUCEW the exercise is appended to the workout being edited.

Remove exercise

- TUCBW the user selects an exercise to delete from the saved workout.
- TUCEW the exercise is removed from the workout's sequence.

Filter exercises

- TUCBW the user applies filters to narrow down the exercise list within the editor.
- TUCEW the list refreshes to reflect the filtered criteria.

Edit exercise

- TUCBW the user selects a specific exercise within the workout to modify its parameters (e.g., changing sets, reps, or rest time).
- TUCEW the new parameters for that specific exercise are updated in the editor.

Save changes

- TUCBW the user clicks the save button to finalize their edits.
- TUCEW the system overwrites the old workout data with the updated information.

Delete workout

- TUCBW the user chooses the delete option for the entire saved workout.
- TUCEW the workout is permanently removed from the user's account.

Schedule Planner

Set session workout

- TUCBW the user selects a date or time block in the schedule to assign a workout.
- TUCEW the chosen workout is successfully mapped to the selected schedule block.

Change a session's workout

- TUCBW the user selects an existing scheduled session to swap its assigned workout.
- TUCEW the new workout replaces the old one in the schedule.

Filter workouts

- TUCBW the user applies filter criteria (by folder or muscles trained) to find a specific saved workout.
- TUCEW the system displays the user's saved workouts that match the filter.

View workout

- TUCBW the user taps on a scheduled workout to see its contents.
- TUCEW the system displays the summary and exercise list for that specific workout.

Remove workout

- TUCBW the user selects a scheduled workout and chooses to unschedule it.
- TUCEW the workout is successfully cleared from the calendar planner.

Workout Overview

View workout

- TUCBW the user navigates to a specific workout's overview page.
- TUCEW the system displays the high-level details, estimated time, and exercise list.

Start workout

- TUCBW the user clicks the "Start" button from the overview screen.
- TUCEW the system transitions into the active "Workout View" mode and begins tracking the session.

Edit workout

- TUCBW the user clicks the "Edit" button on the overview screen.
- TUCEW the system opens the chosen workout inside the "Workout Editor."

Profile

View profile

- TUCBW the user navigates to the profile section of the application.
- TUCEW the system displays the user's personal details, stats, and settings.

Edit profile

- TUCBW the user taps the option to modify their profile information.
- TUCEW the system enables input fields, allowing the user to type in new personal data.

Save profile

- TUCBW the user submits their updated profile details.
- TUCEW the system securely updates and stores the new profile data.

Workout View (Active Session)

Add exercise

- TUCBW the user realizes they want to perform an extra exercise during an active workout and selects "Add."
- TUCEW the new exercise is dynamically added to the current active session.

Remove exercise

- TUCBW the user decides to skip an exercise and selects the remove option.
- TUCEW the exercise is dropped from the active session without affecting the saved template.

View exercise

- TUCBW the user clicks on an exercise to see instructions, past history, or a video demonstration.
- TUCEW the system displays the requested educational details for that exercise.

Log set

- TUCBW the user inputs the completed reps and weight for a specific set and marks it as done.
- TUCEW the system records the data and highlights the set as completed.

End workout

- TUCBW the user presses the button to finish their current active training session.
- TUCEW the system saves the completed session data and displays a post-workout summary.

User Management

Login

- TUCBW the user enters their credentials (username/email and password) and hits submit.
- TUCEW the system authenticates the credentials and grants access to the user's dashboard.

Register

- TUCBW the user fills out the registration form to create a new account.
- TUCEW the system creates the new user profile in the database and logs them in.

Sign out

- TUCBW the user selects the log-out option from the app menu.
- TUCEW the system securely ends the active session and returns the user to the login screen.

Delete account

- TUCBW the user requests account deletion and confirms the irreversible action.
- TUCEW the system permanently wipes all of the user's personal data and credentials from the database.

Custom Exercise Overview

View exercise

- TUCBW the user selects a custom-made exercise from their personal library.
- TUCEW the system displays the details, notes, and tracking history for that custom movement.

Edit exercise

- TUCBW the user chooses to modify the name, instructions, or primary muscles of their custom exercise.
- TUCEW the updated custom exercise parameters are successfully saved.

Delete exercise

- TUCBW the user selects a custom exercise to permanently remove from their library.
- TUCEW the custom exercise is successfully deleted and will no longer appear in search results.
