

OPTILIFTS

BRAND STYLE

The OptiLifts brand defines how we present ourselves visually and verbally. It ensures a consistent, professional appearance across our products, marketing, and support so users recognize and trust the brand at every touchpoint. These guidelines help designers and developers build interfaces that feel coherent, usable, and reliable.

We are a results-focused fitness brand built for people who train with intent. Our product helps users track progress, celebrate wins, and make steady improvements. We aim to communicate clearly, reduce friction, and motivate action without adding unnecessary noise.

GOALS

Clarity

Present data and actions simply so users can make quick decisions.

Trust

Use consistent visuals and copy to build confidence in the product.

Motivation

Encourage progress with energetic and specific language.

Accessibility

Ensure interfaces work for as many users as possible (WCAG AA baseline).

Efficiency

Minimize friction to make common paths fast and obvious.

tone

Tone varies by context but stays clear, confident, and encouraging. Use language that feels human and helpful rather than formal legalese or hype.

In-app (UI & notifications)

Energetic and direct. Use active verbs and

Website & marketing

Motivating and benefit-focused. Highlight

Support & emails

Professional and helpful. Be polite, concise, and clear.

short commands like
"Start session".

outcomes and next
steps.

Accessibility

Use plain language,
avoid slang, and prefer
short sentences for
clarity.

Voice tip

Prefer second-person
"you" when guiding
users. Keep language
inclusive and positive.

COLOUR PALETTE

LIGHT MODE PALETTE

#FAF8F8	#E8DEDE	#CC0022	#AA0018	#1A1A1A	#666666	#1B6E1F	#B35C00
BACKGROUND	SECONDARY	PRIMARY	SECONDARY	ACCENT	SECONDARY	ACCENT	ACCENT

DARK MODE PALETTE

#1C1C1F	#3A3A42	#CC0022	#D94060	#E8E8EC	#9A9AA8	#4CAF50	#FF9800
BACKGROUND	SECONDARY	PRIMARY	SECONDARY	ACCENT	SECONDARY	ACCENT	ACCENT

OptiLifts's colour palette is inspired by the principle of **progressive overloading**, the core concept of the application. **Bold Crimson** was chosen to inspire action and energy, reminiscent of the drive behind every rep.

Neutral surfaces create stark contrast and clarity, with **accent colours** guiding focus without introducing visual clutter. Each hue promotes accessibility, and the layered surface neutrals establish an intuitive visual depth.

The dual-theme palette accommodates varied lighting environments. The **Dark Mode** variant is tailored for low-light gym settings, while the **Light Mode** variant delivers high-contrast visibility for outdoor training.

Semantic colours are used intentionally and sparingly. **Forest Green** celebrates wins like PRs and completed workouts, while **Amber** serves as a clear, non-intrusive indicator for fatigue or warnings.

TYPOGRAPHY

OptiLifts uses a two-font system: a display font for headings and a high-legibility UI font for body and interface text. Below is a concise, scannable reference of roles and canonical values.

PAGE TITLE - OPTILIFTS Bebas Neue · 42px · 400 · +2px · Page titles, wordmarks	SECTION TITLE Bebas Neue · 18px · 400 · +1.5px	CARD VALUE Bebas Neue · 40px · 400 · +1px
BUTTON Barlow · 13px · 700 · Uppercase	Body text sample Barlow · 14px · 400	LABEL / META Barlow · 10–12px · 600–700 · Uppercase

TYPEFACE CONNOTATIONS

The 'Bebas Neue' font is condensed and bold, conveying athleticism and impact. An excellent font for headlines, it portrays our brands character. 'Barlow' is a highly legible font, chosen for its contribution to a clear UI hierarchy, and comfortable reading. Together, these two fonts create a balance of boldness and usability.

LOGO AND ICONOGRAPHY

Overview: The OptiLifts logo system comprises an **icon mark** (dumbbell + hexagon) and a **wordmark**. Each is provided in light and dark static SVGs (logo-light.svg, logo-dark.svg). Animated icon variants are available for motion contexts.

COLOUR & VARIANTS

Use the CSS tokens defined in `src/index.css` for all logo colouring: `--foreground` (structural) and `--brand`/`--brand-2` (accent).

SIZING & CLEARSPACE

Icon mark minimum: 20×20px (UI/icon contexts). Prefer vector SVGs so they scale cleanly.

Wordmark minimum height: 32px. Use larger sizes for hero/header contexts.

Clearspace: Maintain at least 50% of the mark height as clearspace around the logo.

ICONOGRAPHY RULES

Source icons from **Lucide Icons** for consistency (the repo uses `lucide-react`).
Render icons at **18×18px** in sidebars/navigation; buttons may use 20px for balance.
Use `currentColor` so icons inherit parent colour tokens.
Ensure minimum touch target of **44×44px** on mobile.

Iconography library

Plus -Add action (Workouts, Create)	More - overflow menu / contextual actions	X - Close / dismiss	Eye - Toggle visibility
LogOut - Sign out	ChevronDown - Expand / collapse	User - Profile / avatar placeholder	Dumbbell - Exercise / workout concept
Info - System messages	Sun - Theme toggle		

DESIGN PRINCIPLES

These principles guide visuals and interactions in OptiLifts. They prioritise clarity, accessibility, and predictable behaviour. They are short so they fit easily into designs, code, and conversations.

1

DATA FIRST

Lead with the key number or action so users can act quickly.

2

PROGRESSIVE DISCLOSURE

Show summaries first.
Reveal details on demand.

3

AI VISIBLE, NOT INTRUSIVE

Make AI suggestions visible but never override user choices.

4

CONSISTENCY OVER CREATIVITY

Keep layouts and components consistent for predictability.

5

RESPONSIVE BY DEFAULT

Layouts adapt across sizes. Mobile uses sheets and reflowing grids.

6

ACCESSIBILITY IS NON-NEGOTIABLE

All controls include labels, visible focus, and WCAG AA contrast.

UI COMPONENT STYLING

A cohesive library of reusable components that establish consistency across OptiLifts. Each component follows the brand's visual language and accessibility standards.

START SESSION

PRIMARY BUTTON

SECONDARY

SECONDARY BUTTON

+ ADD SET

OUTLINE BUTTON

BUTTON

Primary: Call-to-action buttons for main workflows (Start Session, Save Workout). Uses brand colour with hover and focus states.

Secondary: Alternative actions with lower visual weight. Uses surface colour.

Outline: Tertiary actions like "Add Set" or "Create Exercise". Dashed border for visual distinction.

Icon, Ghost, Text: Additional variants for specific contexts (icon-only controls, text links).

Workout Name

Upper Body Focus

5 exercises · 45 minutes

CARD

Container component for content grouping. Includes header, title, description, content area, and footer slots.

Usage: Workout summaries, exercise lists, session details, and other self-contained information blocks.

Structure: Rounded corners (0.75rem), consistent padding (1.25rem), subtle border and shadow for depth.

Cards support a "small" size variant for compact contexts.

EXERCISE NAME

WEIGHT (KG)

INPUT

Form field for text, number, and file input. Two variants: bordered (default) and underscored.

Features: Focus states with ring styling, error styling for invalid inputs, disabled state, and placeholder text support.

Usage: Workout names, set details, user profile fields, search inputs, and all form data collection.

Always pair with an associated label element for accessibility.

✓ SUCCESS

Workout saved successfully.

⚠ WARNING

High fatigue detected. Consider rest.

i INFO

You have 3 new workout recommendations.

ALERT / TOAST

Non-blocking feedback messages for system events. Appears at the top centre and auto-dismisses after 5 seconds.

Variants: Info (blue), Success (green), Warning (amber), Error (red). Each variant has an icon and left border accent.

Usage: Confirm saves, warn about high fatigue, notify PR achievements, or provide helpful tips.

Triggered via the toast API with optional title and message.

| WORKOUTS

PAGETITLE & NAVBAR

PageTitle: Large heading with left accent bar (brand colour). Used at the top of major pages.

Navbar: Sticky header with logo, nav links, user avatar, and theme toggle. Responsive: sidebar uses the sheet component on mobile.

Theme Toggle: Simple icon button to switch between light and dark modes. Updates the app theme instantly.

All navigation components are responsive and follow touch-friendly sizing rules (min 44×44px).

AVATAR

CIRCULAR IMAGE

AVATAR & CIRCULARIMAGE

Avatar: User profile images with fallback initials. Used in navbar, comments, and user lists.

CircularImage: Flexible circular image container for profile pictures and media. Accepts src and alt props.

Both components use perfect circles (border-radius: 50%) and include error handling for missing images.

Benchpress
Chest • 3 × 8 reps

Search exercises...

SPECIALIZED COMPONENTS

ExerciseCard: Displays exercise name, targeted muscles, and set/rep info in a compact card format.

SearchInput: Text input with debounced search and optional filtering. Used for finding exercises and workouts.

MuscleDiagram: Interactive SVG showing muscle groups. Highlights muscles targeted by selected exercises.

CreateExercise: Modal or form for adding new custom exercises. Includes muscle selection and description.

DropdownMenu: Context menu for actions on cards (edit, delete, duplicate). Uses Radix primitives for accessibility.

ACCESSIBILITY

OptiLifts targets WCAG 2.1 AA as the minimum standard across all screens and both themes. The implementation is split across Colour Contrast, Keyboard Navigability, Screen Reader Compatibility, and WCAG compliance mappings.

COLOUR CONTRAST

All primary text/background combinations meet WCAG 2.1 AA (4.5:1 minimum for normal text, 3:1 for large text and UI components). Key verified pairs are shown below.

#E8E8EC on #1C1C1F

Dark · 13.2:1 · AAA

#B01030 on #1C1C1F

Dark · 5.1:1 · AA

#9A9AA8 on #1C1C1F

Dark · 4.6:1 · AA

#4CAF50 on #1C1C1F

Dark · 5.8:1 · AA

		#FF9800 on #1C1C1F Dark · 8.2:1 · AAA			#1A1A1A on #FAF8F8 Light · 16.8:1 · AAA
		#CC0022 on #FFFFFF Light · 5.9:1 · AA			#666666 on #FAF8F8 Light · 5.2:1 · AA

KEYBOARD NAVIGABILITY

Tab order follows logical top-to-bottom, left-to-right reading flow on every screen.

Radix/shadcn modals and sheets trap focus and return it on close.

Roving tabIndex on ToggleGroups; arrow keys move, Enter/Space selects.

Custom components implement `role`, `tabIndex=0` and key handlers for Enter/Space.

All interactive elements show visible focus with `focus-visible` ring styling.

SCREEN READER COMPATIBILITY

All inputs use explicit labels; placeholders are never the sole label.

Validation errors link to inputs via `aria-describedby` and use `role="alert"`.

Dynamic updates use `aria-live="polite"` (or `assertive` for critical alerts).

Progress indicators use `role="progressbar"` with proper ARIA values.

Non-standard interactive controls expose correct roles and state via ARIA attributes.

WCAG 2.1 AA MAPPINGS

1.4.3 Contrast: All theme colour pairs verified (see table).

1.4.4 Resize text: rem-based sizing; pages scale to 200% without layout breakage.

2.1.1 Keyboard operable: All interactions are keyboard-accessible.

2.4.7 Focus visible: focus-visible ring applied to interactive elements.

3.3.1 Error identification: Inline errors surfaced and announced to assistive tech.
