

OPTILIFTS

BRAND STYLE

The OptiLifts brand defines how we present ourselves visually and verbally. It ensures a consistent, professional appearance across our products, marketing, and support so users recognize and trust the brand at every touchpoint. These guidelines help designers and developers build interfaces that feel coherent, usable, and reliable.

We are a results-focused fitness brand built for people who train with intent. Our product helps users track progress, celebrate wins, and make steady improvements. We aim to communicate clearly, reduce friction, and motivate action without adding unnecessary noise.

GOALS

Clarity

Present data and actions simply so users can make quick decisions.

Trust

Use consistent visuals and copy to build confidence in the product.

Motivation

Encourage progress with energetic and specific language.

Accessibility

Ensure interfaces work for as many users as possible (WCAG AA baseline).

Efficiency

Minimize friction to make common paths fast and obvious.

tone

Tone varies by context but stays clear, confident, and encouraging. Use language that feels human and helpful rather than formal legalese or hype.

In-app (UI & notifications)

Energetic and direct. Use active verbs and short commands like "Start session".

Website & marketing

Motivating and benefit-focused. Highlight outcomes and next steps.

Support & emails

Professional and helpful. Be polite, concise, and clear.

Accessibility

Use plain language, avoid slang, and prefer short sentences for clarity.

Voice tip

Prefer second-person "you" when guiding users. Keep language inclusive and positive.

OptiLifts's colour palette is inspired by the principle of **progressive overloading**, the core concept of the application. **Bold Crimson** was chosen to inspire action and energy, reminiscent of the drive behind every rep.

Neutral surfaces create stark contrast and clarity, with **accent colours** guiding focus without introducing visual clutter. Each hue promotes accessibility, and the layered surface neutrals establish an intuitive visual depth.

The dual-theme palette accommodates varied lighting environments. The **Dark Mode** variant is tailored for low-light gym settings, while the **Light Mode** variant delivers high-contrast visibility for outdoor training.

Semantic colours are used intentionally and sparingly. **Forest Green** celebrates wins like PRs and completed workouts, while **Amber** serves as a clear, non-intrusive indicator for fatigue or warnings.

All colour pairs adhere strictly to **WCAG 2.2 Level AA guidelines** (minimum 4.5:1 for normal text, 3:1 for large text/UI elements), with primary body text achieving **AAA compliance** (exceeding 11:1 contrast).

TYPOGRAPHY

OptiLifts uses a two-font system: a display font for headings and a high-legibility UI font for body and interface text.

PAGE TITLE - OPTILIFTS

Bebas Neue · 42px (2.625rem)

Fallback Stack: system-ui, -apple-system, sans-serif

TYPEFACE CONNOTATIONS

The 'Bebas Neue' font is condensed and bold, conveying athleticism and impact. An excellent font for headlines, it portrays our brand's character. 'Barlow' is a highly legible font, chosen for its contribution to a clear UI hierarchy, and comfortable reading. Together, these two fonts create a balance of boldness and usability.

LOGO AND ICONOGRAPHY

Overview: The OptiLifts logo system comprises an **icon mark** (dumbbell + hexagon) and a **wordmark**. Each is provided in light and dark static SVGs (logo-light.svg, logo-dark.svg). Animated icon variants are available for motion contexts.

COLOUR & VARIANTS

Use the CSS tokens defined in `src/index.css` for all logo colouring: `--foreground` (structural) and `--brand`/`--brand-2` (accent).

SIZING & CLEARSPACE

Icon mark minimum: 20×20px (UI/icon contexts). Prefer vector SVGs so they scale cleanly.

Wordmark minimum height: 32px. Use larger sizes for hero/header contexts.

Clearspace: Maintain at least 50% of the mark height as clearspace around the logo.

CANONICAL LOGO FORMATS

Full Logo: Icon mark & wordmark for primary header and branding contexts

Monogram/Icon Mark: Dumbbell & Hexagon container for favicons, and compact UI avatar slots

Monochrome: Single-tone fill for solid high-contrast backgrounds

Inverse: High-contrast light-on-dark/dark-on-light colour mapping using `--foreground` and `--background`

FORBIDDEN TREATMENTS (DO-NOTS)

NO Stretching: Do not distort aspect ratios or stretch the icon mark

NO Recolouring: Do not apply custom gradients, fills or non-brand colours

NO Drop shadows: Do not use heavy drop shadows, glows or other unapproved affects

NO Low contrast: Do not place the dark logo on dark surfaces or the light variant on light surfaces

ICONOGRAPHY RULES

Source icons from **Lucide Icons** for consistency (the repo uses `lucide-react`).

Render icons at **18×18px** in sidebars/navigation; buttons may use 20px for balance.

Use a consistent sizing scale; 16px (tables/badges), 18px (sidebars/nav), 20px (button actions), 24px (empty states)

Stroke weight: standard 2px stroke width (`strokeWidth=2`)

Use `currentColor` so icons inherit parent colour tokens.

Ensure minimum touch target of **44×44px** on mobile.

Light variant - logo-light.svg

Dark variant - logo-dark.svg

Icon mark - 48×48 preview

Icon mark - 48×48 preview (dark)

DESIGN TOKENS

OptiLifts design tokens represent the source of truth for all visual values on the platform. These are defined in `src/index.css` and Tailwind `@theme` inline definitions.

1. COLOR TOKENS

CSS Variable	Light Value	Dark Value	Tailwind Mapping
<code>--brand</code>	<code>#CC0022</code>	<code>#CC0022</code>	<code>bg-brand/text-brand/bg-primary</code>
<code>--brand-2</code>	<code>#AA0018</code>	<code>#D94060</code>	<code>bg-brand-2/text-brand-2</code>
<code>--background</code>	<code>#FAF8F8</code>	<code>#1C1C1F</code>	<code>bg-background</code>
<code>--surface</code>	<code>#FFFFFF</code>	<code>#26262B</code>	<code>bg-surface/bg-card</code>
<code>--surface-2</code>	<code>#F5F0F0</code>	<code>#2E2E34</code>	<code>bg-surface-2/bg-secondary</code>
<code>--foreground</code>	<code>#1A1A1A</code>	<code>#E8E8EC</code>	<code>text-foreground</code>
<code>--muted-text</code>	<code>#666666</code>	<code>#9A9AA8</code>	<code>text-muted-foreground</code>
<code>--success</code>	<code>#1B6E1F</code>	<code>#4CAF50</code>	<code>bg-success/text-success</code>
<code>--warning</code>	<code>#B35C00</code>	<code>#FF9800</code>	<code>text-warning/bg-warning</code>

Spacing Scale

4px (0.25rem) | **8px** (0.5rem)
12px (0.75rem) | **16px** (1.0rem)

Border Radius Tokens

`--radius-sm`: 6px (calc(var(--radius)*0.6))
`--radius-md`: 8px (calc(var(--radius)*0.8))

24px (1.5rem) | **32px** (2.0rem)
48px (3.0rem)

--radius-lg/--radius: 10px (0.625rem)
--radius-xl: 14px
--radius-2xl: 18px
Pill/Full: 9999px

Shadows and Focus Rings

Card Shadow: shadow-sm/shadow-md

Model Elevation: shadow-2xl

Focus Ring: outline-ring/50 (uses --brand
crimson ring wih 50% opacity)

Breakpoints

sm: 640px (Mobile /small tablet)

md: 768px (Tablet/Desktop sidebar trigger)

lg: 1024px (Standard desktop)

xl: 1280px (Large desktop)

DESIGN PRINCIPLES

These principles guide visuals and interactions in OptiLifts. They prioritise clarity, accessibility, and predictable behaviour. They are short so they fit easily into designs, code, and conversations.

1

DATA FIRST

Lead with the key number or action so users can act quickly.

2

PROGRESSIVE DISCLOSURE

Show summaries first. Reveal details on demand.

3

AI VISIBLE, NOT INTRUSIVE

Make AI suggestions visible but never override user choices.

4

CONSISTENCY OVER CREATIVITY

Keep layouts and components consistent for predictability.

5

RESPONSIVE BY DEFAULT

Layouts adapt across sizes. Mobile uses sheets and reflowing grids.

6

ACCESSIBILITY IS NON-NEGOTIABLE

All controls include labels, visible focus, and WCAG AA contrast.

UI COMPONENT STYLING

A cohesive library of reusable components that establish consistency across OptiLifts. Each component follows the brand's visual language and accessibility standards.

BUTTON VARIANTS & INTERACTIVE STATES

BUTTON

Variants: Primary (brand call-to-action), Secondary (surface fill), Outline (dashed/bordered actions) and Ghost

States: Default, Hover, Focus-visible, Active/Pressed, Disabled, and Loading (spinner.wait cursor)

CARD

Container component for content grouping. Includes header, title, description, content area, and footer slots.

Usage: Workout summaries, exercise lists, session details, and other self-contained information blocks.

Structure: Rounded corners (0.75rem), consistent padding (1.25rem), subtle border and shadow for depth.

Cards support a "small" size variant for compact contexts.

INPUT

Form field for text, number, and file input. Two variants: bordered (default) and underscored.

Features: Focus states with ring styling, error styling for invalid inputs, disabled state, and placeholder text support.

Usage: Workout names, set details, user profile fields, search inputs, and all form data collection.

Always pair with an associated label element for accessibility.

✓ SUCCESS

Workout saved successfully.

⚠ WARNING

High fatigue detected. Consider rest.

i INFO

You have 3 new workout recommendations.

ALERT / TOAST

Non-blocking feedback messages for system events. Appears at the top right and auto-dismisses after 5 seconds.

Variants: Info (brand), Success (green), Warning (amber), Error (red). Each variant has an icon and left border accent.

Usage: Confirm saves, warn about high fatigue, notify PR achievements, or provide helpful tips.

Triggered via the toast API with optional title and message.

BADGES & STATUS TAGS

Achievement Badges: Card component used in Profile page to display milestones and streaks

PR Badge: Highlight personal records on past workouts and active session logs

Muscle Group Tags: Tags indicating targeted muscle groups

Status Indicators: Success green for completed sets and Warning amber for recover/fatigue alerts

| WORKOUTS

PAGETITLE & NAVBAR

PageTitle: Large heading with left accent bar (brand colour). Used at the top of major pages.

Navbar: Sticky header with logo, nav links, user avatar, and theme toggle. Responsive: sidebar uses the sheet component on mobile.

Theme Toggle: Simple icon button to switch between light and dark modes. Updates the app theme instantly.

All navigation components are responsive and follow touch-friendly sizing rules (min 44×44px).

AVATAR

CIRCULAR IMAGE

AVATAR & CIRCULARIMAGE

Avatar: User profile images with fallback initials. Used in navbar, comments, and user lists.

CircularImage: Flexible circular image container for profile pictures and media. Accepts src and alt props.

Both components use perfect circles (border-radius: 50%) and include error handling for missing images.

Benchpress

Chest • 3 × 8 reps

Search exercises...

SPECIALIZED COMPONENTS

ExerciseCard: Displays exercise name, targeted muscles, and set/rep info in a compact card format.

SearchInput: Text input with debounced search and optional filtering. Used for finding exercises and workouts.

MuscleDiagram: Interactive SVG showing muscle groups. Highlights muscles targeted by selected exercises.

CreateExercise: Modal or form for adding new custom exercises. Includes muscle selection and description.

DropdownMenu: Context menu for actions on cards (edit, delete, duplicate). Uses Radix primitives for accessibility.

GRAPH VISUALISATIONS

Interactive charts and diagrams used throughout OptiLifts to visualise workout volume, muscle distributions and training quantities.

MUSCLE DIAGRAM

Highlights primary and secondary targeted muscles

BAR CHART

Weekly training duration bar chart

SPIDER GRAPH

Muscle group set distribution radar graph

CALENDAR

Monthly activity calendar highlighting workout days

VOLUME CHART

Total weight volume line chart over time

LAYOUT & SPACING

Optilifts uses a responsive 12 column grid and a 4px (0.25rem) base spacing scale. Layouts adapt across mobile, table and desktop views.

RESPONSIVE BREAKPOINTS

SM

640px

Mobile; stacks single column cards into 2-column grids

MD

768px

Tablet; adjusts dashboard summaries and nav layout

LG

1024px

Desktop; full multi-column grid, sidebar and chart views

XL

1280px

Large desktop; max-width containers

LAYOUT ADAPTATION (MOBILE VS. DESKTOP)

Mobile Adaptation (< 640px)

- Single column linear stacked layout
- Touch-friendly controls with minimum targets
- Data grids collapse into scrollable swipe cards

Desktop Adaptation (≥ 1024px)

- Multi-column grid views
- Sticky header with link navigation
- Analytics are side by side (spider graph, volume charts, etc.)

ACCESSIBILITY

OptiLifts targets WCAG 2.2 AA as the minimum standard across all screens and both colour themes. Our implementation includes strict colour contrast guarantees, visible focus indicators, screen reader ARIA mappings and minimal motion.

COLOUR CONTRAST & FOCUS INDICATORS

WCAG 2.2 AA Baseline: All primary text/background combinations meet WCAG 2.2 AA (4.5:1 minimum for normal text, 3:1 for large text and UI components)

Focus Indicator Style: Interactive elements show a high-visibility focus ring using `outline: 2px solid var(--brand)` or Tailwind `ring-2 ring-brand/50 ring-offset-2` to guarantee a 3:1 contrast ratio against all backgrounds.

Color Independence: Information, status alerts, and chart data never rely solely on color; icons, text labels, and patterns are always provided alongside hues.

KEYBOARD NAVIGABILITY

Tab order follows logical top-to-bottom, left-to-right reading flow on every screen.

Radix/shadcn modals and sheets trap focus and return it on close.

Roving tabIndex on ToggleGroups; arrow keys move, Enter/Space selects.

Custom components implement `role`, `tabIndex=0` and key handlers for Enter/Space.

MOTION SUPPORT

No Flashing Content: No UI elements flash or pulse more than 3 times per second, preventing seizure triggers.

SCREEN READER COMPATIBILITY

All inputs use explicit labels; placeholders are never the sole label.

Validation errors link to inputs via `aria-describedby` and use `role="alert"`.

Dynamic updates use `aria-live="polite"` (or `assertive` for critical alerts).

Progress indicators use `role="progressbar"` with proper ARIA values.

Non-standard interactive controls expose correct roles and state via ARIA attributes.

AUTOMATED AUDIT SCORES (LIGHTHOUSE)

Automated accessibility audits are performed continuously using Google Lighthouse across primary pages in both Light and Dark themes.

DEMO 1 TO DEMO 2 CHANGELOG

As OptiLifts progressed from our initial 5 use cases to the current production implementation, the brand style guide has evolved to reflect our updated design decisions.

1 Refined palette & WCAG 2.2 Compliance

The light and dark mode tokens were finalised with their HEX, RGB, and HSL values and contrast ratios

Rationale: To ensure the application is comfortable to read in any environment, including bright outdoor workouts to dim gym floors, while still keeping the UI accessible

2 Formalised Typographic Scale & Licensing

Documented modular scale sizes (px, rem, weights, tracking) and SIL font licenses

Rationale: Gives our team a clear hierarchy to follow so that the text stays consistent across screens

3 Design Tokens

Mapped design tokens directly to actual CSS custom properties in index.css

Rationale: Creates a single source of truth for all styling, preventing hardcoded colours from cluttering the component files

4 Graph Visualisations and Components

Added interactive showcases for muscle diagrams, volume charts, spider graphs, and UI controls

Rationale: Interactive charts break down complex workout data into easy-to-digest summaries, rather than overwhelming fitness stats
